

Medical Air Handling Unit for Purification

The medical air handling unit is designed for environments requiring precise air quality. It provides advanced filtration, temperature regulation, and humidity control to maintain sterile conditions.

Product Overview

Medical-Grade Air Purification

The AUC SE4 air handling unit is engineered specifically for critical environments such as hospitals, laboratories, and cleanrooms. It provides precise control over air quality, temperature, and humidity to ensure sterile and comfortable conditions. With a modular design and multi-stage filtration, this unit offers flexible configuration and reliable performance for demanding healthcare applications.

Key Features

Filtration Capability

- Multi-stage filtration system
- Advanced air quality control
- Sterile environment maintenance

Design Advantages

Modular Design, Energy-Efficient, Robust Construction, Easy Maintenance

Technical Specifications

Primary Applications

Hospitals • Laboratories • Cleanrooms

Environmental Control

- Temperature regulation
- Humidity control
