

Metal Cutting and Bending Machine

This heavy-duty machine is designed for cutting and bending metal sheets in industrial settings. It features a robust frame, a precision cutting mechanism, and bending capabilities for various materials.

Product Overview

Industrial Cutting and Bending Solution

This heavy-duty machine is engineered for precision metal forming and shearing processes in industrial environments. It features a robust frame designed for durability and stability during intensive operations. With a large worktable and highly adjustable settings, it allows for customized cutting and bending tasks across a variety of material types.

Operational Capabilities

Design Features

- Robust heavy-duty frame
- Precision cutting mechanism
- Large worktable surface
- Adjustable operational settings

Core Functions

Metal Cutting, Metal Bending, Shearing, Metal Forming
