

Metal Cutting and Folding Machine

This cutting and folding machine is designed for metal forming applications. The shearing machine offers efficient cutting and bending capabilities for various metalworking projects.

Overview

High-Performance Metal Forming Solution

This high-performance cutting and fold-bend machine is engineered specifically for precision metal forming applications. Designed to deliver robust performance in demanding environments, it offers efficient shearing and bending capabilities essential for manufacturing, fabrication, and construction projects. Its durable construction ensures reliable operation for heavy-duty metalworking tasks.

Capabilities

Core Functions

Metal Cutting, Metal Folding, Metal Bending, Shearing

Applications

Industry Suitability

- Manufacturing
- Metal Fabrication
- Construction

Performance

Performance Highlights
