

Metal Cutting and Folding Machine

This high-precision machine is designed for cutting and folding metal sheets. It is engineered for accuracy and efficiency in shearing and bending operations.

Overview

Precision Metal Forming Solution

This high-precision cutting and fold-bending machine is engineered specifically for demanding metal forming applications. Designed to deliver superior accuracy and operational efficiency, it combines robust structural integrity with an advanced control system. It is an ideal asset for professional metal fabrication environments, ensuring consistent, high-quality output for both shearing and bending operations.

Technical Specifications

Model Identifier	SXDK90140D
Primary Functions	Metal Cutting, Folding, Bending, Shearing

Performance Metrics

Key Performance Indicators

1 High

Precision Level

1 High

Operational Reliability

Construction

Construction Features

- Robust heavy-duty frame
- Advanced control system
- Precision-engineered tooling
