

Metal Cutting and Folding Machine

This heavy-duty machine is engineered for cutting and folding metal sheets with precision. It features a robust design for stability and advanced controls for accurate operations on various metal types and thicknesses.

Product Overview

Industrial Metal Fabrication

This heavy-duty cutting and fold-bend machine is engineered for high-precision metal forming applications. Designed for stability and durability, it handles a variety of metal types and thicknesses with ease. Its robust construction and advanced control systems make it an ideal solution for industrial settings requiring efficient, high-volume metal fabrication.

Key Features

Construction

Heavy-Duty • Robust Design

Capabilities

Metal Cutting, Metal Folding, Metal Bending, Precision Shearing

Performance

Operational Highlights

1 Multi-function

Versatility
