

Metal Expansion Anchors for Concrete and Masonry

Heavy-duty metal expansion anchors designed for secure fastening in concrete, brick, and block. These anchors feature a split body that expands when the bolt is tightened, providing a strong and reliable hold.

Product Overview

Heavy-Duty Expansion Anchors

These heavy-duty metal expansion anchors are engineered for secure fastening applications in concrete, brick, and block substrates. Featuring a specialized split-body design, the anchor expands reliably as the bolt is tightened, ensuring a robust and stable hold. They are an ideal solution for mounting structural components, industrial equipment, and various fixtures where high load-bearing capacity is required.

Technical Specifications

Material	Metal
Compatible Substrates	Concrete, Brick, Block
Expansion Mechanism	Split-body expansion

Applications

Primary Applications

- Mounting structural components
- Securing industrial equipment
- General fixture installation
