

Metal Forging Press Machine

This metal forging press machine is designed for metal forming operations. It features a heavy-duty frame for stability and precision during high-force applications, along with a hydraulic or mechanical pressing system for controlled forming.

Overview

Robust Metal Forming Solution

The JZ21-200 is a heavy-duty forging press machine engineered for precision metal forming operations. Designed with a robust frame for maximum stability, it delivers consistent force for demanding applications such as forging, pressing, and stamping. This machine integrates advanced control systems and safety features to ensure reliable, high-quality production results in industrial environments.

Technical Specifications

Drive System

Hydraulic • Mechanical

Model Number

JZ21-200

Applications

Forging, Pressing, Stamping, Metal Forming

Construction

Heavy-duty frame

Safety and Control

Control System

Integrated control panel with monitoring indicators

Safety Compliance

Yes
