

Metal Forming Machinery

This high-precision machinery is designed for shaping and manipulating metal workpieces. It features rollers, guides and advanced control systems for efficient and reliable metal forming.

Overview

High-Precision Metal Forming Solutions

This high-precision metallic processing machinery is engineered for efficient shaping and manipulation of metal workpieces. Featuring a robust design with advanced rollers and guides, it ensures consistent accuracy and reliability in demanding industrial environments. The equipment is versatile, capable of handling various metal types and thicknesses while minimizing material waste to optimize production quality.

Technical Specifications

Machine Weight

500 KG

Weight

Construction Type

Heavy-duty • Industrial Grade

Operational Features

Operational Capabilities

- High-precision metal shaping
- Advanced roller and guide system
- Consistent material processing
- Minimal material waste
