

Metal Pipe and Tube Bending Machine

This heavy-duty machine bends and shapes metal pipes and tubes. It is equipped with a programmable control system, hydraulic actuators and multiple bending dies for precise, repeatable operations across various pipe sizes.

Product Overview

Industrial Pipe and Tube Bending Solution

This heavy-duty metallic processing machine is engineered for precise and repeatable bending and shaping of metal pipes and tubes. Featuring a robust construction with hydraulic actuators, it is designed to meet the demands of high-volume industrial production environments. The system includes a programmable control interface and versatile tooling options to accommodate various pipe diameters and bending radii.

Technical Capabilities

Key Features

- Hydraulic actuation system
- Programmable control interface
- Heavy-duty frame construction
- Multi-die compatibility
- Repeatable bending precision

Performance Metrics

1 Hydraulic

Operation Type

1 Programmable

Control System

Application

Suitability

Metal Fabrication, Industrial Manufacturing, High-Volume Production, Pipe Processing
