

Metal Shearing and Bending Machine

This machine is designed for metal forming applications, specifically shearing and bending processes. Its digital control panel includes indicators for axis positioning and operational status, enabling accurate and efficient material processing.

Overview

Precision Metal Processing Solution

This industrial-grade metal shearing and bending machine is engineered for high-precision metal forming applications. It features an integrated digital control panel that allows operators to monitor and adjust X and Y axis positioning with ease. Designed for efficiency and accuracy, this machine streamlines both shearing and bending processes, making it an essential tool for professional metal fabrication environments.

Control System

Safety Features

- Emergency stop button
- Operational status indicators

Control Interface

Digital Control, X-Axis Indicator, Y-Axis Indicator, E10 Control Module

Operational Capabilities

Primary Functions

Shearing • Bending • Metal Forming
