

Metal Shearing and Folding Machine

This machine is designed for metal forming operations, specifically shearing and folding. It features a robust construction and incorporates a hydraulic system for powerful cutting and bending.

Product Overview

Professional Metal Forming Solution

This high-performance metal shearing and folding machine is engineered for precision metal forming operations. Built with a robust frame for industrial durability, it integrates a powerful hydraulic system to ensure clean, accurate cuts and bends. The machine is designed for efficiency and safety, featuring an intuitive control panel, a material handling roller system, and operator safety guards.

Technical Features

Machine Type	Hydraulic Shearing and Folding Machine
Key Capabilities	Metal Shearing, Metal Folding, Metal Bending

Design & Construction

Construction	Robust heavy-duty frame
--------------	-------------------------

Operation & Control

Workflow Enhancements

- Hydraulic power system
- Material handling roller system
- Foot pedal operation

Control Interface	Integrated control panel for precise adjustments
-------------------	--

Safety

Safety Equipment

Protective Guards • Foot Pedal Control
