

Metal Sheet Cutting and Folding Machine

This heavy-duty machine is designed for precision cutting and folding of metal sheets. It features a high-capacity hydraulic system and a rigid frame for stable operation in demanding industrial environments.

140矫直机

Overview

Industrial Metal Forming Solution

This heavy-duty cutting and fold-bend machine is engineered for demanding industrial metal forming applications. Designed for precision, it offers robust performance in shearing and bending metal sheets, ensuring consistent results in high-volume environments. Built with a rigid frame and a high-capacity hydraulic system, it provides the stability and reliability required for professional manufacturing and fabrication workshops.

Key Features

Performance Highlights

140 mm

Model Series

Core Capabilities

Metal Shearing, Metal Bending, Industrial Forming, High-Capacity Hydraulic System

Technical Specifications

Construction

- Rigid frame design for stable operation
- Adjustable cutting parameters
- Heavy-duty industrial build

Suitable Industries

Manufacturing • Metal Fabrication • Metalworking
