

# Metal Sheet Cutting and Folding Machine

This heavy-duty machine is engineered for precision shearing and bending of metal sheets. It features a sturdy frame, a precise cutting blade, and a powerful bending mechanism.

## Overview

### Precision Metal Forming Solution

This heavy-duty cutting and fold-bend machine is engineered for high-precision metal forming applications. Designed for reliability and robust performance, it integrates both shearing and bending capabilities into a single, efficient unit. With a sturdy frame and intuitive control panel, it is an ideal solution for fabrication, prototyping, and high-volume production runs.

## Key Features

### Core Functions

Precision Shearing, Metal Bending, Sheet Metal Forming, Heavy-Duty Construction

## Technical Specifications

### Operational Features

- Integrated control panel for parameter adjustment
- High-precision cutting blade system
- Powerful bending mechanism
- Sturdy frame for industrial stability

## Applications

### Suitable Applications

Metal Fabrication • Prototyping • Production Runs
