

Metal Straightening Machine 1000-2500KN

This metal straightening machine utilizes servo and transmission technology to improve efficiency. It achieves a straightening precision of up to 0.01mm.

Overview

High-Precision Metal Straightening Solution

This metal straightening machine is engineered for demanding industrial environments that require tight tolerances and consistent results. With a force capacity ranging from 1000KN to 2500KN, it provides high-performance, high-reliability, and high-precision automation for various metal forming applications. The robust construction ensures long-term stability and durability, while advanced control systems offer precise regulation over bending, folding, straightening, and leveling processes.

Technical Specifications

Force Capacity Range

1000 KN

Minimum Force

2500 KN

Maximum Force

Key Performance Attributes

- High-precision output
- Robust construction for stability
- Advanced control systems
- High reliability for industrial use

Supported Processes

Straightening, Bending, Folding, Leveling
