

Mica Panel Heater

This electrical mica heater is a radiant heating device designed for indoor use. The mica heating element ensures efficient and even heat distribution, providing a comfortable and safe heating solution.

Product Overview

Efficient Heating Solution

The electrical mica heater is a high-performance radiant heating device engineered specifically for indoor environments. Featuring a robust black mica heating panel housed within a durable silver-finished frame, it delivers consistent and even heat distribution. Designed with user safety and convenience in mind, this unit integrates adjustable control knobs and stable support feet for reliable operation in any professional or residential setting.
