

Milk Refrigerator with Cup Warmer

This unit combines refrigeration for milk or other beverages with a cup warming function, making it ideal for coffee shops, breakfast buffets, or self-service areas. The refrigeration unit maintains a consistent temperature to keep beverages fresh, while the cup warmer ensures that cups are ready for serving hot drinks.

Product Overview

Dual-Function Beverage Solution

This professional-grade unit combines efficient milk refrigeration with a top-mounted cup warming station, making it an essential addition for coffee shops, breakfast buffets, and self-service areas. Designed for commercial reliability, it features a tempered glass door for product visibility and a robust stainless steel construction. The integrated digital control panel ensures precise temperature management, keeping milk fresh while maintaining warm cups ready for immediate service.
