

Mine Drilling Rig

This mine drilling rig is used for installing monitoring instruments in underground environments. It is suitable for rock drilling and various mining applications.

Overview

High-Performance Mine Drilling Rig

This professional-grade drilling rig is engineered for demanding underground construction and mining environments. Designed for efficiency and reliability, it supports critical infrastructure projects such as pumped-storage power stations and tunnel development. Its robust construction ensures consistent performance in confined cavern settings.

Operational Context

Installation Capability

Monitoring Instruments • Heavy-Duty Drilling

Suitable Environments

Underground Mining, Tunnel Construction, Pumped-Storage Power Stations, Rock Drilling
