

Mineral Prospecting Detector

This device is used for the exploration of metal and non-metallic mineral resources. It features a user-friendly interface with a screen display and keypad for easy operation.

Overview

Professional Prospecting Solution

This advanced underground water and mineral detector is engineered for high-precision prospecting tasks. Designed with a portable form factor and user-friendly interface, it streamlines field operations for professionals. The system integrates complex signal processing capabilities to assist in reliable underground resource identification.

Technical Specifications

Connectivity Ports

- HV
- A
- B
- RS232
- N

Main Unit Model	DZD-6A
Compatible Accessories	DUK-2A Multiplex Electrode Converter

Features

Key Functionalities

Underground Water Detection • Mine Prospecting • Portable Design • Digital Display
