

Mineral Specimens for Geological Study

These mineral specimens are suitable for geological study or display. The samples show-case different textures and color variations, including rough, earthy gray-brown and smoother whitish-gray.

Product Overview

Geological Study Mineral Specimens

These mineral specimens are curated specifically for educational and geological study purposes. The collection features samples with distinct textures and colorations, ranging from rough, earthy gray-brown formations to smoother, multi-toned whitish-gray compositions. Ideal for classroom environments, research labs, or private collections, these samples provide tangible examples of diverse geological characteristics.

Physical Characteristics

Sample Variety

- Rough, earthy texture specimen
- Smooth, multi-toned texture specimen

Coloration

Gray-brown, Whitish-gray, Dark gray

Usage & Application

Application

Geological Study • Educational Research • Display
