

Miniature AC Contactor

This compact contactor is designed for switching electrical circuits. It features screw terminals for secure connections and includes normally open auxiliary contacts.

Product Overview

Compact Industrial Switching Solution

The K series AC Contactor is designed for reliable performance in electrical circuits operating at 50/60Hz. It is engineered for long-distance circuit control, frequent starting, and stopping of AC motors, making it suitable for both industrial and residential applications. Compliant with international standards including IEC60947-4-1, this contactor ensures safety and efficiency when used independently or combined with a thermal relay for a magnetic motor starter.

Electrical Ratings

Rated Insulation Voltage	1000 V
Rated Operation Current (AC-3)	9-330A
Frequency	50/60Hz

Technical Specifications

Key Features

- Screw terminals for secure connections
- Suitable for magnetic motor starters
- Long-distance circuit control
- Frequent switching capability

Series	K Series
Auxiliary Contacts	Normally Open (NO)
Standards Compliance	IEC60947-4-1, GB14048.4
