

Miniature Integrated Programmable Logic Controller

This miniature programmable logic controller has a compact design with a high degree of hardware integration. The product's design takes valuable installation space into full account.

Product Overview

About the MB20 Series

The MB20 Series is a high-performance miniature integrated Programmable Logic Controller (PLC) engineered for modern industrial automation. It combines a compact, space-saving design with a highly modular architecture, allowing for flexible configuration in space-constrained cabinets. Designed for reliability and ease of use, this controller supports advanced logical and computing instructions to manage complex industrial processes.

Technical Specifications

Max Expansion Modules	8 modules
Digital Control Capacity	200 points
Analog Control Capacity	40 points

Installation & Design

Terminal Quality

High-end terminals • Secure wiring

Mounting Options

Flat mount, DIN rail

Expansion Capabilities

Supported Modules

- Digital expansion modules
- Analog expansion modules
- Special function expansion modules
