

MMA 315 Inverter Welding Machine

This compact inverter welding machine is designed for a variety of welding applications. IGBT DC inverter technology ensures stable and efficient welding, with adjustable current and arc force controls for optimal results across different materials.

Overview

Professional Performance

The MMA 315 is a compact and powerful inverter welding machine engineered for versatile welding applications. Utilizing advanced IGBT DC inverter technology, it ensures stable and highly efficient welding performance across various materials. Designed for both professional and DIY environments, it features precise current control and adjustable arc force to guarantee optimal results regardless of material thickness.

Technical Specifications

Performance Metrics

315 A

Max Current

Technology	IGBT DC Inverter
Model	MMA 315

Features & Controls

Control Features

- Digital Current Meter
- Adjustable Current Control
- Adjustable Arc Force

Compliance

Certifications	CE Certified
----------------	--------------

Design

Design Attributes

Compact • Portable • Robust Construction
