

Mobile Cold Storage Freezer

This mobile freezer is a prefabricated cold storage unit designed for efficient temperature control. Its robust construction includes insulated panels to minimize energy consumption and maintain consistent internal temperatures.

Product Overview

Professional Mobile Cold Storage Solution

This mobile freezer is engineered for high-performance temperature control in demanding environments. It features a robust, insulated construction designed to minimize energy consumption while maintaining consistent internal conditions. Equipped with advanced refrigeration technology and precise microcomputer controls, it offers a versatile solution for temporary or flexible cold storage requirements.

Technical Specifications

Temperature Range

10 °C

Max Temperature

-80 °C

Min Temperature

Core Components

- High precision panel
- Refrigeration machine
- High-efficiency heat exchanger
- Energy saving organ

Control System

Full automatic microcomputer controller

Key Features

Mobile Design, Energy Efficient, Automatic Control, High Precision
