

Mobile Refrigeration and Ventilation System

This is a refrigeration and ventilation system designed for mobile use. The robust system provides cooling and air circulation for vehicles.

General Overview

High-Performance Mobile Climate Solutions

This heavy-duty refrigeration and ventilation system is engineered for demanding mobile applications, including specialized transport vehicles and luxury tour buses. Featuring a robust, integrated chassis design, the unit provides consistent cooling and airflow performance in challenging environments. It is a professional-grade component designed to meet the rigorous thermal management requirements of modern mobile infrastructure.

Suitable Applications

Luxury Tour Bus, Specialized Transport, Mobile Climate Control

Technical Specifications

Design Features

- Integrated heavy-duty chassis
- Advanced grille airflow architecture
- Complex cooling components
- Mobile-optimized mounting

Core Metrics

1 Heavy-Duty

Cooling Grade
