

Modular Air Handling Unit

This modular air handling unit integrates filtration, cooling, and air distribution. The transparent housing provides component visibility and accessibility for controlled environment applications.

Product Overview

Advanced Air Management Solution

This Modular Air Handling Unit is engineered for controlled environment applications that demand precise air quality and temperature management. The system features a versatile multi-section design, integrating filtration, cooling, and air distribution components into a single cohesive unit. Its transparent housing ensures excellent component visibility and easy accessibility for maintenance and monitoring.

Design & Construction

Housing Design	Transparent housing for component visibility and accessibility
System Structure	Modular Design, Multi-section, Integrated Filtration, Cooling Section, Air Distribution

Performance & Application

Primary Application	Controlled environment air quality and temperature management
