

Monitor Connector Component

This is a connector component used in computer monitors. It features a metallic circular contact point mounted on a square gold-colored base, affixed to a rectangular substrate.

General Overview

Monitor Interface Component

This specialized monitor connector component is engineered for precise signal transmission within display interfaces. Featuring a robust metallic circular contact point mounted on a square gold-colored base, the component ensures reliable connectivity. It is designed to be integrated into rectangular substrates, making it an essential element for professional electronic assembly and hardware maintenance.

Physical Characteristics

Contact Style	Circular metallic contact
Base Material Finish	Gold-colored plating
Mounting Configuration	Rectangular substrate mount

Compliance and Usage

Typical Applications	Monitor Assembly, Signal Interface, Electronic Hardware
