

Moon Type Diamond Cup Wheel

This diamond cup wheel is designed for grinding and preparing concrete, stone, and masonry surfaces. The segmented design with moon-shaped cutouts allows for aggressive material removal and reduces heat.

Product Overview

Moon Type Diamond Cup Wheel

The Moon Type Diamond Cup Wheel is engineered for the efficient grinding and surface preparation of concrete, stone, and various masonry materials. Its distinctive segmented design, featuring moon-shaped cutouts, facilitates aggressive material removal while effectively minimizing heat buildup during operation. Built with a durable diamond matrix, this tool ensures long-lasting performance and consistent results for professional applications like leveling uneven surfaces, removing coatings, and shaping edges.

Technical Specifications

Primary Applications

- Surface leveling
- Coating removal
- Edge shaping
- General surface preparation

Compatible Materials

Concrete, Stone, Masonry

Design Features

Design Style

Moon Type • Segmented

Cooling Mechanism

Moon-shaped cutouts for heat dissipation
