

Motorcycle Brake Hub Assembly

This motorcycle brake hub assembly is designed for rear wheel fitment. It features a circular housing with mounting holes, brake shoes, and a cable connection mechanism.

Product Overview

Reliable Braking Performance

The YB100 motorcycle brake hub assembly is engineered for durability and consistent stopping power. Constructed from high-quality cast aluminum, this lightweight unit ensures structural integrity and efficient heat dissipation. It features an integrated actuating lever and brake shoe mechanism, providing a complete solution for rear wheel braking requirements.

Technical Specifications

Key Components

- Brake shoes
- Actuating lever
- Cable connection mechanism
- Integrated mounting holes

Compatibility	YB100
Material	Cast Aluminum
Mounting Type	Rear Wheel, Bolt-on
