

Motorcycle Drive Sprocket

This high-performance motorcycle sprocket is CNC machined from 7075-T6 aluminum. It is precision-engineered for optimal power transfer, smooth operation and enhanced durability.

Product Overview

High-Performance Drive Sprocket

This high-performance motorcycle drive sprocket is precision-engineered for optimal power transfer and durability. Manufactured using advanced CNC machining processes, it ensures a perfect fit and smooth operation for your drivetrain. Crafted from high-grade 7075-T6 aluminum alloy, this component offers superior strength while significantly reducing unsprung weight.

Technical Specifications

Material	7075-T6 Aluminum Alloy
Manufacturing Process	CNC Machined
Performance Features	Lightweight, High Strength, Precision Engineered
