Product Overview

High-Performance Motorcycle Crankshaft

This OEM-quality motorcycle crankshaft is meticulously engineered to withstand high stress and RPMs, ensuring smooth power delivery and extended engine life. Precision-balanced for reduced vibration, it is constructed from high-strength alloy steel for superior wear resistance. This component is designed for a direct fit, making it an essential replacement for maintaining peak engine efficiency and reliability.

Technical Specifications

Material	High-strength alloy steel
Key Features	OEM Quality, Precision Balanced, High-RPM Rated, Reduced Vibration, Wear Resistant

Quality Assurance

Quality Control Protocols

- 100% incoming quality control
- 100% mass factory inspection
- 100% production according to technical drawings

Logistics & Packaging

Packaging
