Product Overview

High-Performance Foot Pegs

These motorcycle foot pegs are engineered for professional-grade performance, offering superior control and stability in demanding riding conditions. Constructed from T7 7075 aluminum, they feature a wide platform design that provides nearly 30% more surface area than standard pegs, significantly reducing rider fatigue. The open architecture prevents mud and debris buildup, while the removable hardened steel teeth ensure consistent traction and long-term durability.

Material & Construction

Material Composition	T7 7075 Aluminum, Hardened Steel
Finish	Anodized

Performance Features

Surface Area Increase

30 %

Increased Surface Area

Key Features

- Removable and replaceable teeth
- Open design prevents mud buildup
- Compatible with stock hardware
- Corrosion resistant

Compatibility

Installation	Direct replacement for stock pegs; uses existing stock hardware.
