

Motorcycle Radiator

Motorcycle radiators provide efficient cooling for optimal engine performance. These aluminum radiators are designed for easy installation and enhanced heat dissipation.

Product Overview

High-Performance Aluminum Radiator

This high-performance motorcycle radiator is engineered for optimal cooling efficiency and durability. Constructed entirely from lightweight aluminum, it offers superior heat dissipation and pressure tolerance compared to standard units. Designed with precision TIG welding and optimized fin density, this radiator ensures consistent engine temperatures for both racing and high-performance street applications.

Technical Specifications

Cooling Efficiency Increase

30 %

Efficiency Gain

Key Features

- Precision TIG welding
- Optimized fin density
- Direct-fit design
- Enhanced pressure tolerance

Construction Material

100% Aluminum

Part Identifiers

29021-12021, XX1032, 03

Installation & Compatibility

Included Components

- Mounting points
- Mounting brackets
- Fittings

Installation

Direct-fit design for easy installation
