

Motorcycle Rectifier for WAVE-125

This motorcycle rectifier converts AC from the stator to DC, charging the battery and powering electrical components. Designed for the WAVE-125, it regulates voltage to protect sensitive electronics.

Product Overview

High-Performance Voltage Regulation

This motorcycle rectifier is precision-engineered for the WAVE-125 model, providing essential conversion of alternating current from the stator into stable direct current. Its robust construction is designed to withstand harsh operating conditions, including significant temperature fluctuations and mechanical vibrations. By effectively regulating voltage, the unit prevents overvoltage damage to sensitive electronic components, thereby ensuring consistent electrical system reliability and longevity.

Technical Specifications

Compatible Model	WAVE-125
Core Function	AC to DC conversion and voltage regulation

Features

Key Benefits

- Optimized for WAVE-125 electrical systems
- Protects electronic components from overvoltage
- Engineered for high-vibration environments
- Temperature-resistant durable housing
- Ensures stable battery charging

Design Status

Replacement Part • High Durability
