

Mountain Spring Water Ultrafiltration System

This ultrafiltration system is designed for processing mountain spring water. The system employs a multi-stage filtration process within vertical cylindrical modules, ensuring efficient and reliable purification.

Overview

Professional Ultrafiltration Solution

This ultrafiltration system is specifically engineered for the reliable processing of mountain spring water. Featuring a robust, multi-stage filtration design, it utilizes vertical cylindrical modules to ensure high-efficiency purification. The unit is mounted on a durable gray metal frame, fully equipped with integrated gauges, valves, and piping for precise flow control and monitoring.

Technical Specifications

Filtration Technology	Ultrafiltration
Module Configuration	Vertical cylindrical housing
Frame Construction	Industrial gray metal

Features

Compliance Status

Mini-Fill Compatible • Quick Test Ready

Key Features

Multi-stage filtration, Flow monitoring, Integrated gauges, Industrial design
