

Mower Metal Fan Blade

This metal fan blade is designed for mower applications. It features a multi-blade configuration optimized for efficient airflow and cooling.

Product Overview

Precision-Engineered Cooling Solution

This metal fan blade is specifically designed for integration into mower cooling systems, offering robust performance in demanding agricultural environments. Through advanced manufacturing processes including punching, machining, welding, and boring, each unit achieves high dimensional accuracy. The result is a reliable component with optimized airflow characteristics and a secure mounting interface for easy assembly.

Manufacturing & Quality

Quality Features

- Optimized blade profile for low runout
- High-accuracy inner hole boring
- Securely welded central hub

Processing Technologies

Punching, Machining, Welding, Boring

Application

Market Suitability

Agricultural Machinery • Cooling Systems

Primary Application

Mower cooling systems
