

MT-52 Welding Electrode

The MT-52 welding electrode is designed for high-efficiency welding, featuring a titanium iron powder type coating. It is suitable for flat or fillet position welding and can be used with both AC and DC power sources.

Product Overview

High-Efficiency Welding Electrode

The MT-52 is a high-efficiency, titanium iron powder type electrode engineered for superior welding performance. It features a high melting rate of approximately 150%, providing excellent arc stability and minimal spatter for increased productivity. Designed for ease of use, it allows for simple slag removal and is suitable for both AC and DC power sources in flat or fillet welding positions.
