

Multi-Cavity Injection Mold

This multi-cavity injection mold is designed for producing plastic parts. It features a two-plate design with ejector pins, optimized for high-volume manufacturing.

Product Overview

High-Efficiency Injection Molding Solution

This multi-cavity injection mold is engineered for high-volume manufacturing of precision plastic components. Featuring a robust two-plate design, it incorporates multiple cavities to significantly increase production efficiency and throughput. Constructed from hardened steel, this mold ensures durability and consistency for demanding industrial applications.

Technical Specifications

Ejection System

Ejector pins included

Design Type

Two-plate design

Construction Material

Hardened steel

Manufacturing Capabilities

Efficiency Metrics

1 Yes

Multi-Cavity Configuration

Production Focus

High-volume manufacturing, Precision components
