

Multi-Conductor Data Cable

This is a multi-conductor cable for data transmission. It consists of multiple insulated wires enclosed in a grey outer jacket.

Product Overview

High-Performance Multi-Conductor Data Cable

This multi-conductor data cable is engineered for reliable signal transmission in complex communication and networking environments. Featuring a robust outer jacket and precisely insulated internal conductors, it ensures minimal interference and signal integrity. Designed for professional installation, this cable provides the durability and flexibility required for demanding industrial and commercial data applications.

Physical Characteristics

Jacket Color	Grey
Construction	Multi-conductor

Application & Usage

Primary Application	Data Communication, Networking, Industrial Control
---------------------	--

Design Features

Key Features

- Individually insulated conductors
- Durable outer protective jacket
- Flexible design for easy routing
- High-density conductor arrangement
