

Multi-Core Communication Cable

Communication cables facilitate signal transmission in electronic devices and systems. These multi-core cables are available in various colors and some are encased in flexible conduit for enhanced protection.

Overview

Versatile Multi-Core Communication Solutions

This multi-core communication cable is engineered for reliable signal transmission and internal wiring across a variety of electronic devices. Featuring color-coded insulation for easy identification and organization, the cables are designed to streamline complex installation processes. Available in both single-core and multi-core configurations, these cables provide the flexibility and protection required for modern communication systems.

Technical Features

Cable Configuration

- Single-core insulated wires
- Multi-core bundled cables
- Flexible conduit compatibility

Identification System

Blue, Cyan, Yellow, Red

Application

Primary Usage

Internal Wiring • Signal Transmission • Electronic Devices • Communication Systems

Physical Characteristics

Protection Features

Encased in flexible conduit for enhanced protection and organization
