

Multi-Directional Fluid Control Valve Assembly

This multi-valve assembly is designed for controlling fluid flow in multiple directions. It includes a solenoid valve, manual valve stems, and threaded ports.

Overview

Precision Fluid Control

This multi-directional fluid control valve assembly is engineered for reliable performance in plumbing and hydraulic systems. Constructed with high-quality brass components, the assembly integrates a water pressure relief valve and optional solenoid configurations to suit diverse operational requirements. Its robust design ensures precise flow management for demanding professional applications.

Technical Specifications

Product Weight	0.925 kg
Primary Material	Brass

Components

Integrated Features

- Water pressure relief valve
- Solenoid valve
- Manual valve stems
- Filter screen

Solenoid Options	Grade A, Grade B, Grade C
------------------	---------------------------
