

Multi-Element Receiver Antenna with Remote Control

This antenna is designed for efficient signal reception. It features a multi-element array with remote control for adjusting its orientation.

Overview

High-Performance Signal Reception

The JY75 multi-element receiver antenna is engineered for efficient signal capture and superior directionality. Featuring a robust reflector screen and an integrated remote control system, this unit allows for precise orientation adjustments to optimize reception. Built with durable, weather-resistant materials, it offers reliable performance for demanding outdoor installations.
