

Multi-Panel Power Distribution Switchboard

This multi-panel switchboard is engineered for efficient power distribution and control. Its modular design incorporates a variety of electrical components, offering flexible configuration and expansion capabilities.

General Overview

Industrial Power Management

This multi-panel power distribution switchboard is engineered for robust performance in industrial and commercial environments. It features a modular construction with multiple vertical sections, offering significant flexibility for power generation, transmission, and distribution applications. Each section is equipped with comprehensive control devices, circuit breakers, and metering components to ensure reliable electrical management.

Supported Configurations	Main Switchboard, Emergency Switchboard
---------------------------------	---

Design Specifications

Design Features

Modular construction • Scalable configuration

Material	Durable metal
Finish	Light gray coating

Components

Included Components

- Meters
- Switches
- Circuit breakers
- Control devices
