Product Overview

High-Performance Multi-Turn Actuation

This multi-turn electric actuator is engineered for precise and reliable control of gate and globe valves in demanding industrial environments. Designed for outdoor use, it features a robust, weather-resistant construction that ensures long-lasting performance and accurate positioning. With integrated manual override capabilities and clear position monitoring, this unit provides a dependable solution for automating complex valve systems.

Technical Specifications

Protection Class

IP67

Explosion-Proof Grade

ExdIIBT4

Compatible Valve Types

Gate Valve, Globe Valve, Sluice Gates

Key Features

Operational Capabilities

- High torque output
- Precise travel control with limit switches
- Manual override via handwheel
- Clear position indicator
- Adjustable speed settings
