

Multi-Unit Interphone Communication System

This multi-unit interphone system facilitates communication between different locations. The wired system includes multiple units, each equipped with numbered buttons for direct connection.

Overview

Professional Multi-Unit Communication

This multi-unit interphone system is designed to facilitate clear and efficient communication across different locations within a building or office complex. The system supports up to four distinct stations, allowing for direct connectivity between units. Its intuitive design features dedicated buttons for each station, ensuring reliable and immediate contact for professional environments.
