

Multi-Zone DC Inverter Air Conditioner

This multi-connected DC inverter air conditioning unit is designed for efficient cooling and heating. It features multiple connected units for zoned climate control, DC inverter technology for energy savings, and advanced control systems for precise temperature management.

Product Overview

High-Efficiency Climate Control

This Multi-Zone DC Inverter Air Conditioner is engineered for versatile cooling and heating applications in demanding environments. Utilizing advanced DC inverter technology, it ensures optimal energy efficiency and precise temperature management throughout the space. The system is designed for high-capacity performance, making it an ideal solution for commercial or large-scale residential climate control needs.

Performance Metrics

Cooling Capacity

40 KW

Capacity

Electrical Specifications

Parameter	Value	Unit
Power Input	12.3	KW
Current	20.9	A

Technical Features

System Capabilities	DC Inverter, Cooling & Heating, Multi-Zone Capable
Refrigerant	R410A
