

Multistage Centrifugal Pump

This multistage centrifugal pump is designed for demanding applications. It features a robust construction and multistage impeller design for generating high pressure and maintaining consistent flow rates.

Product Overview

High-Efficiency Multistage Performance

The TSWA series multistage centrifugal pump is engineered for demanding industrial and water management applications. Its advanced multistage impeller design generates significant pressure while maintaining consistent, energy-efficient flow rates. Built for longevity and reliability, this pump is an ideal solution for pressure boosting, irrigation, and diverse industrial fluid transfer needs.

Technical Specifications

Pump Type	Multistage Centrifugal Pump
Fluid Compatibility	Clean water, Slightly contaminated liquids

Applications

Primary Applications

- Water supply
- Pressure boosting
- Industrial processes
- Irrigation systems

Performance

Operational Efficiency

1 Multistage

Design Configuration
