

NE Plate Chain Vertical Hoist

The NE Plate Chain Hoist is a vertical conveying system designed for efficient material handling. Featuring a heavy-duty plate chain, it ensures reliable and continuous operation for lifting and transporting bulk materials.

Product Overview

NE Plate Chain Vertical Hoist

The NE Plate Chain Vertical Hoist is a robust vertical conveying system engineered for efficient material handling in agricultural and industrial environments. Featuring a heavy-duty plate chain, this system ensures reliable, continuous operation for lifting bulk materials such as grain, feed, and aggregates. Its modular design and enclosed steel housing provide both durability and the flexibility to customize height and capacity to meet specific operational needs.

Technical Specifications

Construction	Durable steel frame with enclosed housing
Drive System	Geared motor drive system
Safety Mechanisms	Enclosed housing, Controlled lifting, Safety mechanisms

Application

Primary Applications

- Agricultural material handling
- Industrial bulk transport
- Grain and feed processing
- Aggregate handling
- Construction machinery integration

Design Advantages

Modular Design • Heavy-Duty Chain • Customizable Height • Weather Protected
