

Network Communication Management Device

This network communication management device efficiently manages and distributes network signals. It is designed for managing and monitoring network activity within a building or facility.

Overview

Professional Network Management

This network communication management device is engineered for robust signal distribution within commercial facilities. Designed with multiple input and output ports, it ensures reliable connectivity and effective network traffic handling. The integrated LED indicators provide real-time monitoring of network activity, making it an essential component for facility-wide communication infrastructure.

Connectivity

Port Configuration

- WAN Port
- LAN1 Port
- LAN2 Port
- LAN3 Port
- LAN4 Port
- Multiple IN/OUT ports

Model Identifiers

JD-2047817, JD-2047819

Features

Monitoring Capabilities

Network Activity Indicators • LED Status Monitoring • Signal Distribution Management
