

Network Server Cabinet Enclosure

This server cabinet features a stylish one-push lock design for ease of access. The mesh front and back doors, combined with blind plates, optimize airflow and cooling efficiency, reducing energy consumption.

Product Overview

Professional Network Infrastructure Enclosure

This high-performance server cabinet is engineered for the secure housing and organization of critical network equipment. Constructed from high-quality cold-rolled steel, the cabinet offers robust protection and durability for demanding IT environments. The design prioritizes equipment safety, accessibility, and efficient thermal management to support long-term hardware reliability.

Technical Standards

Compliance Standards

ANSI/EIA RS-310-D, IEC297-2, DIN41491, DIN41494, GB/T3047.2-92, ETSI

Material and Construction

Construction Details

Component	Material	Thickness
Frame	SPCC Cold-rolled steel	2
Bracket	SPCC Cold-rolled steel	2

Finishing Process

- Degreasing
- Pickling
- Phosphating
- Electrostatic spraying
