

Network Switches

Network switches are designed for data transmission and network management. These devices feature multiple Ethernet ports for connecting various network devices such as computers, servers, and printers.

Overview

High-Performance Network Connectivity

These professional-grade network switches are engineered for robust data transmission and efficient network management within local area networks (LAN) and wide area networks (WAN). Equipped with multiple high-density Ethernet ports, they seamlessly connect servers, workstations, and peripherals to ensure reliable communication. Designed for scalability, these units provide the essential infrastructure required for modern business connectivity and reliable data flow.

Product Models

Supported Models

- Rapier G6 SX/LX
- Rapier G6
- Rapier 48i
- Rapier 24i
- SUPER3627

Technical Features

Application Scope	LAN, WAN, Data Transmission, Network Management
Connectivity	Yes
